TRACE BODY SHOP SYSTEM

As the soon as the work is completed, Job Card details update the Trace CV Body Shop System which has the Invoice ready in moments

The new Trace Commercial Vehicle Body Shop System transforms and streamlines existing manual or partly automated tasks during the quote-repair-invoice process. Most importantly, it eliminates the same data being written out up to four times. Duplicated tasks end with data entered only once.

Now, information builds through the stages of estimate, order, job card and invoice eliminating current labour-intensive and unpopular tasks. These manual tasks were made worse by having to enter or write parts and price information several times in less than adequate systems. That stops now. With an the Trace 'enter and update' sequence the Trace Body Shop System can

have an invoice ready as soon as work on a vehicle is complete.

This new System is based on the tried and tested Trace Systems software and was developed, 'the Trace way' with discussions with Body Shop owners and managers. They are the people who have been trying it out. They have also been making certain it does what they need. They like the results.

With Trace Body Shop System, body shop efficiency, speed and accuracy can be improved easily and quickly.
